RADIO RX-D70BT (EG)

- **Large Display & Buttons for Easy Operation**
- **Wide Compatibility of Audio Sources**
- **High Quality Sound in a Compact Body**

SHORT DESCRIPTION

The D70BT is an all-in-one radio that supports CD, Bluetooth®, USB, AUX, FM and DAB+ sources. It is very easy to operate thanks to its ergonomically designed buttons and dot matrix display, and delivers high quality sound via settable functions like its Preset Equaliser and Bass Sound Mode. Plus, the square form and stylish Molding net front panel make the D70BT an easy match for any room interior and a built-in handle allows you to carry it anywhere you go. With wide range media support integrated into a single device, operating ease and a stylish design, the D70BT is perfect for everyday use.

- Dot Matrix Display with white backlight

SMART FUNCTION
All in one playback

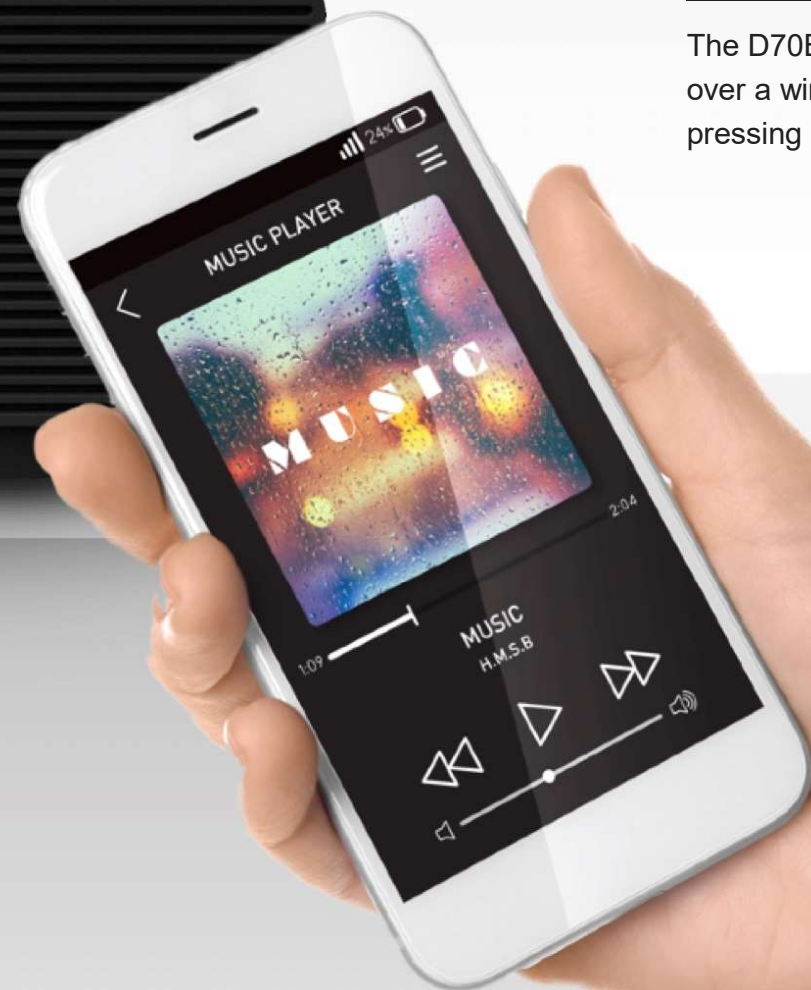

Wide compatibility of audio sources

In addition to supporting radio broadcasting like FM and DAB+, the D70BT can also play back a plethora of popular audio sources including CDs, Bluetooth®, USB and AUX.

In a nutshell, it is an all-in-one radio that lets you enjoy your favourite music via a wide range of media.

SMART FUNCTION
Bluetooth®

Stream your music wirelessly

The D70BT supports Bluetooth®, so you can listen to music on your smartphone over a wireless connection. Playback and volume control are also as simple as pressing a button, which easily turns the D70BT into a stereo speaker.

SMART FUNCTION Play Timer

Start your day with the radio

The D70BT comes with a Play Timer that automatically plays content at a specific time every day or just on set days of the week. The audio source and volume can be set in advance, so you can enjoy your favourite songs without tedious setting or tuning every time.

DESIGN

Square modern design

Technical Information

Compact square design

The D70BT is configured into a geometrically balanced and simple square form design that beautifully plays off the horizontal and vertical lines of room interiors. Moreover, at just 310 x 128 x 205 mm in size, it can be located almost anywhere, including in cramped places.

Retro modern design

The louvered structure of the front panel is designed to deliver the high quality sound directly from the speaker. Together with the matte finish, it also creates both a retro and modern look as a design accent.

Technical Information

10 key buttons

The front panel has buttons for selecting, playing and skipping through tracks and stations, which can be used while music is playing. From the radio, up to 60 stations (FM30 and DAB30 stations) can be preset, while, with CDs, up to 99 tracks can be easily selected. Moreover, the buttons are large and sloped diagonally like a set of stairs, making them easier for fingers to build traction and press.

Top buttons

The power, volume control and other setting buttons used prior to playback are on the top panel. This is also where the Equaliser and Bass Sound Mode are set.

Dot matrix display

The display on the front panel is a full dot matrix display that supports RDS (Radio Data System). It can display the genre of music and broadcast content, the station name, and the title of the current song, the album name and artist in text.
